PROBLEM STATEMENT TACKLED

- **Problem Statement 2:**

- How can Startup ASEAN address ecosystem fragmentation and become the single gateway for discovering opportunities, programmes, funding, talent, and partners across ASEAN?
- MEDIRUSH takes inspiration from the idea of reducing fragmentation by bringing multiple disconnected services together in one accessible platform. It applies this concept to the healthcare and pharmacy industry rather than the startup ecosystem itself.

THE PROBLEM WE'RE SOLVING

- Healthcare services, pharmacies, and skincare services are often accessed through separate platforms or physical locations. Users may need to visit different websites to find medicines, locate nearby healthcare facilities, book doctor consultations, and obtain skincare products.

- This can make accessing and managing everyday healthcare needs inconvenient and time-consuming. Users also lack a centralised platform to manage their medical documents, prescriptions, medication reminders, and skincare routines.

PROPOSED SOLUTION

- MEDIRUSH is an integrated healthcare, pharmacy, and beauty care website that brings these services together in one platform.
- It provides users with access to online pharmacy services, doctor consultations, AI-powered health assistance, nearby healthcare facilities, skincare products, and beauty consultations.
- The goal is to simplify how users discover, access, and manage their healthcare and beauty needs through a single platform.

HOW THE SOLUTION WORKS

MEDIRUSH operates through several interconnected modules:

- Online Pharmacy: Users can browse medicines, check availability from participating pharmacies, and order eligible products.
- Healthcare Services: Users can search for doctors, book consultations, and locate nearby hospitals, clinics, and pharmacies.
- AI Health Assistant: Users can select a body part, describe their symptoms, and receive general health information and guidance.
- Prescription & Medical Records: Users can upload prescriptions and medical documents for secure storage and appropriate pharmacist verification.
- Medication Management: Users can organise their medications and receive reminders.
- Skincare & Beauty Marketplace: Users can browse and purchase skincare products.
- AI Skincare Assistant: Users can learn about skincare ingredients and receive general skincare guidance.
- Skincare Routine Tracker: Users can organise and monitor their daily skincare routines.

THE TECHNOLOGIES AND TOOLS USED

The proposed technologies and tools include:

- Gemma / Gemini API: For AI-powered health and skincare assistance.
- HTML5, CSS3, and JavaScript: For website development and responsive user interfaces.
- Database: For managing user accounts, product information, appointments, and personal records.
- Authentication System: For secure user registration and login.
- Cloud Storage: For storing uploaded prescriptions and medical documents securely.
- Google Maps API: For locating nearby hospitals, clinics, and pharmacies.
- Payment Gateway Integration: For processing online purchases.
- AI and Interactive Anatomy Interface: For the interactive human anatomy and symptom exploration feature.

THE TARGET USERS OR BENEFICIARIES

- General Consumers: People who want convenient access to healthcare and pharmacy services.
- Patients: Individuals who need to manage prescriptions, medical records and medication schedules.
- University Students and Working Adults: People looking for convenient healthcare access and everyday medical products.
- Skincare Enthusiasts: Individuals interested in skincare products, ingredients and personalised routines.
- Healthcare Professionals: Registered doctors and pharmacists who provide consultations and verify prescriptions.
- Participating Pharmacies: Pharmacies that want to make their products more accessible to online customers.

WHAT MAKES YOUR SOLUTION UNIQUE

- All-in-One Platform: Combines healthcare services, pharmacy shopping and skincare services.
- Interactive Human Anatomy: Allows users to explore body parts and provide information about their health concerns.
- AI-Powered Assistance: Provides general health and skincare information through dedicated AI assistants.
- Connected Prescription Management: Allows users to upload prescriptions and medical records, with pharmacist verification for prescription medicine orders.
- Personalised Health Management: Combines medication reminders, medical records and skincare routine tracking.
- Convenience: Allows users to access multiple everyday healthcare and beauty services through one website.
